

Practical – 2

Introduction to JSP

1. Create a JSP page to display your personal and academic details with current date and time. The page output will show your basic details like RESUME with current date and time.
2. Create an HTML page to take Student Name and Marks of 5 Subjects as inputs from user. Write a JSP page to process the inputs and show the Students report by calculating their total marks, percentage and result.
3. Write a JSP page for providing user with currency converter. Collect the conversion currency and the amount, use declarative tag in JSP to store the base values for converting the amount into Indian Rupees and display the output with the converted amount and date.
4. Create a simple login page using JSP. Check username and password from arrays of username and password on JSP page.
